

IN THE SPECIFICATION:

Please replace the paragraph at page 2, lines 3-11 with the following paragraph.

A marked-up version of the paragraph at page 2, lines 3-11, showing the changes made thereto, is attached.

a1  
-MR includes video see-through mode that involves superimposing a picture of virtual space (for example, virtual objects drawn by computer graphics (hereinafter abbreviated to CG) or text information) over a picture of captured real space captured by an imaging apparatus such as a video camera, and optical see-through mode that involves superimposing a picture of virtual space over a picture of the real space transmitted optically through a display screen--

Please replace the paragraph at page 2, lines 12-18 with the following paragraph.

A marked-up version of the paragraph at page 2, lines 12-18, showing the changes made thereto, is attached.

a2  
-MR is expected to find applications in medical aids which will show the inside of the patient's body to the surgeon as if it were transparent, applications in work aids which will show assembly procedures of a product superimposed over the actual objects in a factory, and other applications totally different in quality from those of conventional

VR--
